

Turfgrass quietly adds to the beauty of our lives and even our mental and physical health.

Why is Scien-Turf-ic Sod a good investment?

Your **Scien-Turf-ic Sod** *instantly* turns your bare soil into a lush green lawn. A well maintained lawn and landscape can enhance the "curb appeal" of your home, adding as much as 15% to the value.

Sod Grasses for Those Who Demand Quality

Why do customers demand Scien-Turf-ic Sod?

Scien-Turf-ic has been providing sod grasses to Metro Denver, Boulder and the mountain areas for over 30 years, having sold more than 7,000 acres.

Scien-Turf-ic uses its own special blends to produce the highest quality turfgrass that is specially adapted for the Colorado climate.

Scien-Turf-ic's philosophy is to produce a premium turfgrass, to market it with honesty and integrity, to install our products professionally and to do this competitively without sacrificing quality of product or service. We provide value!

Scien-Turf-ic Sod needs no special care because it is healthy and mature when installed. Just water, mow and fertilize your new lawn with **Scien-Turf-ic Fertilizer**. Your lush, green grass will be the envy of the neighborhood.

Where can I use Scien-Turf-ic Sod?

Scien-Turf-ic Sod can be installed practically anywhere, even where seeding is impossible. Sod is the most cost effective method of controlling wind and water erosion. A sodded lawn will absorb greater amounts of rain than a seeded lawn. **Scien-Turf-ic Sod** is durable and establishes itself quickly. In a couple of weeks, it's ready for full use, creating the perfect surface for lawn games and family outdoor living.

When can I install Scien-Turf-ic Sod?

You can install **Scien-Turf-ic Sod** anytime during the year when the installation site is properly prepared and field conditions permit harvest. There is no need to wait for the "right" season to put in your lawn.

How will Scien-Turf-ic Sod affect our environment?

With today's ecological concerns, more people are recognizing the importance of the relationship of sod grass to the environment.

- **Pollution Control**

Turfgrass is very effective in reducing pollution by trapping dust and dirt from the air. A 2,500 square foot lawn absorbs carbon dioxide from the atmosphere and releases enough oxygen for a family of four to breathe.

- **Nature's Air Conditioner**

Turfgrass has a tremendous cooling effect. On a hot summer day, lawns will be 30 degrees cooler than asphalt and 14 degrees cooler than bare soil. The front lawn of 8 houses has the cooling effect of about 70 tons of air conditioning.
